Education

University of Texas at Dallas Expected May 2028
Bachelor of Science in Computer Science (GPA: 3.70 / 4.00) *Dallas, TX*

- **Relevant Coursework:** Computer Science I, Computer Science II, Discrete Mathematics, Computer Architecture, Linear Algebra, Probability & Statistics in CS and SE

Experience

Frontend & Backend Developer Aug 2026 – Present
UTD EPICS – Stronger Women Digital Learning Platform *Richardson, TX*

- Developed a full-stack authentication system with email OTP login and signup flows, Zod form validation, and protected routes using Nuxt, Vue, and TypeScript.
- Restructured authentication into dedicated login and signup pages and integrated them with backend APIs and the database, routing authenticated and unauthenticated users correctly.
- Built database schemas and queries with Drizzle ORM to store user information and track progress across courses and modules.

Software Developer Aug 2026 – Present
ACM AI – Cascade *Richardson, TX*

- Built a web application that converts long-form creator videos into a week of platform-specific short-form content, using FFmpeg for video processing and vertical reframing.
- Designed a multi-stage AI pipeline with structured prompting and output validation, using Qwen3-VL via Ollama to identify engaging ∼30-second clips and faster-whisper for word-level synced captions.
- Developed a FastAPI backend with Neon PostgreSQL, Clerk authentication, and AWS S3 storage, plus a review-and-edit interface so creators can adjust AI-selected clips.

Backend Developer Aug 2026 – Present
Theta Tau Kappa Zeta – Internship Matching Bot *Richardson, TX*

- Developing the backend of a math-based internship matching system that compares student resumes against internship postings.
- Built resume normalization and data extraction pipelines, including PDF ingestion and validation, to convert unstructured resumes into structured data.
- Researched algorithms for structuring resume data and explored multithreading and parallel processing to improve efficiency.

Personal Projects

Ingredient Toxin Detector | *Python* Aug 2024 – May 2025

- Developed a Python application that scans product ingredient lists from shopping websites and flags potentially toxic chemicals using string-matching and keyword-filtering algorithms.
- Built an interface that color-codes ingredient safety levels and integrates verified toxin references.
- Presented findings to mentors and professionals as part of an independent study mentorship.

CivicVoice | *Python, HTML/CSS* Aug 2025 – Dec 2025

- Designed a civic education platform that uses data visualization and infographics to make civic information more accessible to students and community members.
- Developed Python-based dashboards highlighting voter participation trends and policy awareness.

Technical Skills

Languages: Python, TypeScript, JavaScript, Java, C++, SQL, HTML/CSS
Frameworks & Libraries: FastAPI, Nuxt, Vue.js, Zod, Drizzle ORM, Pandas, NumPy, Matplotlib
Tools & Technologies: PostgreSQL, AWS S3, FFmpeg, Ollama, Clerk, Git, Figma, Visual Studio Code
Concepts: REST APIs, Authentication, Database Design, Data Structures & Algorithms, Object-Oriented Programming
